

4-port USB HUB
USB Ver. 2.0. USB cable included.
Hot Plug & Play.
Power supply included.

This small device expands the number of USB ports of the work stations, to which more and more USB peripherals are connected for their uses and comfort.

The connection of peripherals via USB ports, not needing an additional power source, (although it is included for the cases that consumption is higher), has no cables added to it, which makes it the most interesting option for domestic use. Also, it requires no special knowledge on installation on the user's part.

Standard: Compatible with USB 2.0 features

USB 2.0 Ports:
